

2027 KAWASAKI KLR®650 MOTORCYCLE LINEUP

ESCAPE, EXPLORE, ENVY

For 2027, the Kawasaki KLR®650 motorcycle lineup expands with the addition of the new KLR®650 DF ABS. The Durable Force (DF) model brings rugged, utilitarian styling and standard frame sliders to the proven KLR650 platform while retaining the dependable performance, long-range capability, and all-day comfort riders expect from Kawasaki's dual-purpose adventure motorcycle.

First introduced in 1987, the KLR650 has remained a cornerstone of Kawasaki's adventure lineup by delivering the proven reliability and practical versatility needed for everything from everyday errands to cross-country travel. Its long-travel suspension, natural upright riding position, and touring-focused comfort help make it a trusted partner both on- and off-road.

KLR®650 DF ABS: DURABLE FORCE

New for 2027, the KLR650 DF ABS delivers the same proven performance as the standard KLR650 with a more rugged, utilitarian appearance. Metallic Flat Raw Graystone bodywork gives the KLR650 DF ABS a robust, understated look designed to fit naturally in urban environments and remote settings. Hand guards, a large rear carrier, and standard frame sliders reinforce its tough, functional character. The frame sliders are also available separately for other KLR650 models as Kawasaki Genuine Accessories.

Complementing the dark bodywork, the bolts, axle shafts, brake caliper bracket, rear suspension linkage arm, rear carrier, and other components feature black finishes. Simple "Kawasaki" logos on the fuel tank shrouds complete the KLR650 DF ABS model's clean design.

RELIABILITY & CONFIDENCE

At the heart of every KLR650 is a fuel-injected, 652cc, four-valve single-cylinder engine. A flat power curve supports controlled low-speed off-road riding and confident freeway cruising, while strong midrange-focused performance helps the KLR650 handle everyday travel and extended adventures. Fuel injection contributes to impressive fuel efficiency and dependability starting in cold conditions and at high altitude.

A 6.1-gallon fuel tank supports long stretches between fuel stops, adding to the KLR650's long-distance touring capability. A large 300mm front brake disc delivers strong stopping power, while ABS-equipped models provide added rider reassurance.

RIDE COMFORT & TOURING POTENTIAL

The high-tensile steel, semi-double-cradle frame incorporates an integrated rear frame and a long chassis layout for composed handling at highway speeds, with or without luggage. Long-travel suspension helps absorb bumps on pavement and off-road terrain, while the relaxed, upright riding position supports long hours in the saddle. Rubber-mounted handlebars and footpegs, along with rubber dampers beneath the seat, help manage vibration and enhance comfort.

A tall windshield with two-position adjustability provides wind protection for longer rides. The large aluminum rear carrier adds useful cargo capacity. Available Kawasaki Genuine Accessories include side cases and a top case with top-opening convenience, one-key compatibility, and styling designed to complement the motorcycle.

A 26-amp generator provides up to 80 watts of capacity for accessories, depending on usage.

TOUGH ADVENTURE LOOKS

The KLR650's imposing chassis, large fuel tank, and protector-equipped shrouds create the rugged, functional appearance expected of a go-far adventure motorcycle. Carefully selected colors and graphics reinforce its tough image, while the energy-efficient LED headlight provides bright illumination and complements the overall styling. An all-digital multi-function instrument panel keeps important information easy to view.

KLR®650 / KLR®650 ABS

The standard 2027 KLR650 is available with or without ABS and serves as the foundation of the lineup, combining the platform's fuel-injected engine, long-range capability, composed handling, touring comfort, and practical equipment.

KLR®650 S / KLR®650 S ABS

The KLR®650 S is the low-seat variation of the KLR650 and is available with or without ABS. Dedicated settings for the lowered front and rear suspension help enhance the rider's reach to the ground while retaining the handling and comfort characteristics of the standard model. A low seat, optimized shifter-to-footpeg distance, and shorter side stand complete the S model's rider-focused package. The KLR650 S has a 32.1-inch seat height, 2.2 inches lower than the standard KLR650 model's 34.3-inch seat height.

KLR®650 ADVENTURE ABS

The KLR650 ADVENTURE ABS adds carrying capacity and convenience with factory-installed side cases, LED auxiliary lights, frame sliders, a tank pad, a DC power outlet, a USB socket, and ABS.
